

# LITHIUM-ION BATTERY SAFETY MANUAL

---

## KEY ADVICE

- Ensure the lithium-ion battery is fully charged before use
- Unplug the battery pack when not in use for several days, to avoid the battery going completely flat, which can cause permanent damage
- A green LED light displayed means the battery pack is fully charged
- A red LED light displayed means battery is in charging mode

## STORAGE

- Batteries should be stored at temperatures between 0 -45°C / 113°F
- Store battery pack when not in use in a clean, dry and ventilated room
- Batteries should avoid contact with corrosive substances, fire and heat

## BATTERY LIFE

Battery life expectancy is dependant on many variables such as:

- The frequency of use
- The number of motors in each recliner and/or lounge suite
- The weight of the user
- Supportive technology i.e. USB charger, wireless charger, etc

Rechargeable batteries, by nature have a limited lifespan, gradual power loss occurs overtime

An audible low battery signal (beep) is transmitted when the unit needs to be recharged

## FAQ

- **Why does my power pack need to be recharged so frequently?**  
The frequency in which your Power Pack will need to be recharged varies greatly on the amount of use. To ensure the best results over the lifetime of your product, be sure to charge fully (to 100% capacity) before the first use.
- **How frequently do I need to recharge the battery pack?**  
This is all dependant on use, it can be as long as 4 weeks, or as little as 2 days
- **Can the battery pack be left to re-charge overnight, or will that lead to the battery pack becoming 'over charged'?**  
There is no problem with charging the battery overnight. The pack will not overcharge
- **How do you know that the battery requires re-charging?**  
There is a light on the battery, which indicates the charging status. A green light suggests the battery is charged, whilst a red light indicates that pack is not fully charged. If the battery pack requires immediate recharging, a warning noise will be triggered in addition to the red light. Note: if the battery pack goes completely flat, this can cause permanent damage to the battery pack
